

Product Specification

4G⁺

LiveView Market-Leading Functionality >>

- >> Vehicle tracking by GPS - current location and speed of the vehicle can be seen.
- >> Alerts regarding faults - such as geo-fencing breaches, failing hardware, switch to SD card recording, video loss on channel (e.g faulty camera)
- >> Remote download footage - can be viewed through mobile phone or PC
- >> Historical footage - downloadable footage for the last month
- >> Change settings remotely - settings such as camera resolution, date, time and recording settings can be changed remotely. Software updates can also be sent remotely.
- >> Multiple vehicle viewing - the interface can show 32 live and recorded streams at one time, meaning that many fleets can be managed on a single interface.
- >> Geofencing - multiple fences can be applied and notifications will alert the user when a vehicle enters or leaves those zones. Not only does this provide an anti-theft security feature, businesses can also use geofencing to monitor employees in the field, automate time cards and keep track of individual vehicles over particular time periods.
